Author Index 2005

Adachi, K	Running-in effect on the load-carrying capacity of a water-lubricated SiC thrust bearing	117
Allanson, D R	Film pressure distribution in water-lubricated rubber journal bearings	125
Aylott, C J	Martensite decay in micropitted gears	77
Bair, S	Shear thinning correction for rolling/sliding elastohydrodynamic film thickness	69
Bolander, N W	Lubrication regime transitions at the piston ring–cylinder liner interface	19
Bolander, N W	Analysis of non-Newtonian and piezoviscous effects in dynamically loaded connecting-rod bearings	209
Bolander, N W	Thermohydrodynamic analysis for a hydrodynamic journal bearing groove	263
Bull, S J	Martensite decay in micropitted gears	77
Cabrera, D L	Film pressure distribution in water-lubricated rubber journal bearings	125
Chang, L	On the two points of views of plastically deformed asperity contacts with friction loading	201
Changlin Gui	Influence of journal misalignment caused by shaft deformation under rotational load on performance of journal bearing	275
Cui, J	Transient elastohydrodynamic analysis of elliptical contacts. Part 2: thermal and Newtonian lubricant solution	187
Dowson, D	Transient elastohydrodynamic analysis of elliptical contacts. Part 2: thermal and Newtonian lubricant solution	187
Dowson, D	Elastohydrodynamic lubrication in biological systems	367
Drinkwater, B W	The phase shift of an ultrasonic pulse at an oil layer and determination of film thickness	387
Dwyer-Joyce, R S	Wear of human teeth: a tribological perspective	1
Dwyer-Joyce, R S	The application of ultrasonic NDT techniques in tribology	347
Dwyer-Joyce, R S	The phase shift of an ultrasonic pulse at an oil layer and determination of film thickness	387
El Khlifi, M	Thermohydrodynamic analysis for a hydrodynamic journal bearing groove	263
Farrar, R	Wear of ultrahigh-molecular-weight polyethylene against titanium-nitride-coated counterfaces	41
Fatu, A	Analysis of non-Newtonian and piezoviscous effects in dynamically loaded connecting-rod bearings	209
Fisher, J	Wear of ultrahigh-molecular-weight polyethylene against titanium-nitride-coated counterfaces	41
Forte, P	Flexibility matrix method applied to the finite element elastohydrodynamic analysis of plain journal bearings	59
Friswell, M I	Detection of severe sliding and pitting fatigue wear regimes through the use of broadband acoustic emission	85
Gandjalikhan Nassab, S A	Inertia effect on the thermohydrodynamic characteristics of journal bearings	459
Gerber, G R	Lubrication regime transitions at the piston ring–cylinder liner interface	19
Glavatskih, S B	Oil-film thickness and temperature measurements in PTFE and babbitt faced tilting-pad thrust bearings	179
Goshima, T	Predicting sliding wear behaviour of a tin-based white metal under varying pressure and speed conditions	451
Ha, D N	An aerodynamic bearing with adjustable geometry and self-lifting capacity. Part 1: self-lift capacity by squeeze film	33
Hajjam, M	Analysis of non-Newtonian and piezoviscous effects in dynamically loaded connecting-rod bearings	209
Hatto, P	Wear of ultrahigh-molecular-weight polyethylene against titanium-nitride-coated counterfaces	41
Hirani, H	Multiobjective optimization of journal bearing using mass conserving and genetic algorithms	235
Ishihara, S	Predicting sliding wear behaviour of a tin-based white metal under varying pressure and speed conditions	451
Jeddi, L	Thermohydrodynamic analysis for a hydrodynamic journal bearing groove	263
Jin, Z M	Transient elastohydrodynamic analysis of elliptical contacts. Part 2: thermal and Newtonian lubricant solution	187
Jin, Z M	Elastohydrodynamic lubrication in biological systems	367

Jun Sun	Influence of journal misalignment caused by shaft deformation under rotational load on performance of journal bearing	275
Kamali, A	Wear of ultrahigh-molecular-weight polyethylene against titanium-nitride-coated counterfaces	41
Kasolang, S	The phase shift of an ultrasonic pulse at an oil layer and determination of film thickness	387
Kato, K	Running-in effect on the load-carrying capacity of a water-lubricated SiC thrust bearing	117
Khonsari, M M	A simplified thermohydrodynamic stability analysis of journal bearings	225
Khonsari, M M	Letter	291
Lahmar, M	Elastohydrodynamic analysis of double-layered journal bearings lubricated with couple-stress fluids	145
Latini, F	Flexibility matrix method applied to the finite element elastohydrodynamic analysis of plain journal bearings	59
Lees, A W	Detection of severe sliding and pitting fatigue wear regimes through the use of broadband acoustic emission	85
Lewis, R	Wear of human teeth: a tribological perspective	1
Lubrecht, A A	An engineering tool for the quantitative prediction of general roughness deformation in EHL contacts based on harmonic waviness attenuation	303
Mainwaring, R	Engine lubricant trends since 1990	331
Majumdar, B C	Computer-aided design of hydrodynamic journal bearings considering thermal effects	133
Majumdar, B C	On the dynamics of EHD mixed lubricated ball bearings. Part I: formulation of stiffness and damping coefficients	411
Majumdar, B C	On the dynamics of EHD mixed lubricated ball bearings. Part II: non-linear structural vibration	423
Mansouri, S H	Effects of piston design parameters on piston secondary motion and skirt–liner friction	435
Mathew, M T	Transitions in microabrasion mechanisms for WC–Co (HVOF) coated steel	49
Mba, D	Experimentally established correlation between acoustic emission activity, load, speed, and asperity contact of spur gears under partial elastohydrodynamic lubrication	401
McCarthy, D M C	Oil-film thickness and temperature measurements in PTFE and babbitt faced tilting-pad thrust bearings	179
McEvily, A J	Predicting sliding wear behaviour of a tin-based white metal under varying pressure and speed conditions	451
Mortier, R M	Engine lubricant trends since 1990	331
Oila, A	Martensite decay in micropitted gears	77
Olver, A V	The mechanism of rolling contact fatigue: an update	313
Price, E D	Detection of severe sliding and pitting fatigue wear regimes through the use of broadband acoustic emission	85
